

## EVEN LARGE BOATS CAN HAVE RETRACTABLE CLEATS

While large vessels require heavy-duty deck hardware, that doesn't mean it has to look like it came off a workboat. Available in 30cm and 38cm models, the Accon Marine Pull-Up Cleat retracts flush into its base for a clean and elegant appearance, yet is built to handle the loads a docked yacht places on it.

Manufactured of polished marine-grade 316 stainless steel, Accon Pull-Up Cleats have soft, rounded edges that won't catch toes when retracted. To use, the cleat is simply grabbed in the center and pulled out of the base; precision machining ensures smooth operation. They're available in through-bolt and stud mount versions, and include a waterproofing cup to stop unwanted water runoff below deck.

The 30cm model Pull-Up Cleat accommodates line up to 19mm and loads up to 6,350kg. The through-bolt model 205-12 installs with four 8mm screws; the stud mount version 205-12-S includes 76mm stainless steel studs.

For line sizes up to 25mm and loads up to 9,071kg, the 38cm Pull-Up Cleat is the largest flush-mounted cleat available. Model 115-15 installs with four 9.5mm screws while version 115-15-S utilizes 102mm studs.

Installation of an Accon Pull-Up Cleat is straightforward and can be
