

SLIM-LINE CLEATS FIT IN SKINNY PLACES

Retractable cleats enhance the appearance, functionality and safety of any boat, but may not fit on some deck designs. Slim-Line Cleats from Accon Marine offer convenient pull-up operation in a strong but sleek profile suited for locations with limited clearance.

Crafted from marine-grade 316 stainless steel for exceptional strength, durability and corrosion resistance, Accon Slim-Line Cleats retract flush to their base when not required. This eliminates a potential tripping hazard on narrow decks and walkways when underway. Integrated recesses in the base and on either side of the cleat make it easy to simply pull back up when needed.

Offered in a choice of polished or brushed stainless finishes, Accon Slim-Line Cleats come in 4.5", 6", 8" or 10" sizes to suit a variety of vessels—with svelte overall widths of 1.3" up to 2.8" among the range. Their unique design and high-quality construction assure exceptional strength; in independent testing the 6" model was shown to withstand loads of up to 4,700 lbs.

Slim-Line Cleats are shipped with a backing plate which serves as a convenient cut-out template for installation. An optional waterproofing cup to eliminate unwanted runoff below deck is also available. MSRP for Accon Marine Slim-Line Cleats ranges from \$89.84 for the 4.5" model up to \$258.51 for the 10" version.
