

CONTEMPORARY PULL-UP CLEATS CHECK ALL THE BOXES

When in use, traditional fixed cleats are quite utilitarian. But they're also trip and snag hazards, much to an owner's dismay, and take away from the clean lines of a modern boat. Accon Marine's 490 Series Rectangular Pull-Up Cleats are different. Not only do they have a sleek, contemporary design but retract to sit flush with the surface. When needed, they simply pull up and are ready for use.

Accon 490 Series Rectangular Pull-Up Cleats are made from polished marine-grade 316 stainless steel for corrosion resistance and a premium appearance. The slim tops are slightly convex for water runoff and to accommodate convenient fingertip lifting notches integrated on either side.

The cleats are available in three sizes. Accon's 152mm model is 37mm wide and handles line up to 16mm in diameter; the 203mm L x 41mm W version is for 19mm line; and the 254mm L x 48mm W model accommodates line to 25mm. They require 74mm, 91mm and 93mm of mounting clearance below the surface, respectively.

Installing 490 Series Rectangular Pull-Up Cleats is straightforward. Using the supplied template, two holes are drilled and the cleat is installed. From underneath, the included external tooth lock washers are added with the smooth side up. Then, using a liquid thread lock, the nuts are added and tightened.
