

## PULL-UP CLEAT DOUBLES AS LIFTING EYE

Whether its design is classic or contemporary, boats are more attractive when their decks are free of clutter. The Accon Marine 209 Series Lifting Cleat stays elegantly flush with the surface until it's needed. With a simple pull, the hardware extends to provide a standard cleat for tying off lines and a convenient connection point when raising the vessel.

The Accon Marine Lifting Cleat is made from polished 316 stainless steel for superior corrosion resistance and reliability; the lifting hardware is durable 304 stainless. It's offered in 152mm, 203mm and 254mm sizes to fit any boat.

Each Lifting Cleat comes with a standard 305mm rod, sling, crossbar and bow eye. To accommodate a wide range of installations, extended-length rods are available while the optional Pivot Attachment will compensate for slight hardware installation misalignment. Incredibly strong, independent laboratory testing confirmed the cleat's maximum working load to be 1,814kg in the direction of the rod axis.

Simple to install, the Accon Marine Lifting Cleat utilizes thru-bolt mounting. The included backing plate doubles as a convenient cut-out template. For the sleekest appearance without visible screw heads, the 203mm and 254mm models are available in a stud mount form. They're backed by a two-year warranty.
