PURE CLEAN FISHING POWER

Constantly in touch with their natural surroundings, anglers are often at the forefront of conservation. That's why so many are converting to the clean, reliable propulsion of an Elco EP-20 Electric Outboard. Beyond the peaceful, odor-free experience, this powerful motor expands access to fishing spots that are increasingly off-limits to combustion-powered boats.

With only four moving parts, the Elco EP-20 is elegant in its internal design. Problems that plague traditional outboards, such as overheating and fuel line issues, are irrelevant, and it requires only minimal maintenance. Plus, there's no warm-up needed. From the minute the power is switched on, the motor is ready to go.

With power comparable to a 20 hp petrol engine, the Elco EP-20 delivers over 90% efficiency and an impressive thrust ratio to bust through headwinds and choppy water. Its all-day operation time and expanded range allow anglers to fish new waters without needing to head back early. The optional Elco DASH and its companion mobile app wirelessly turn any Android or iOS mobile device or smartwatch into a full-function dashboard that monitors speed, RPM, remaining charge and distance, and other important battery and propulsion data.

The award-winning Elco EP-20 Electric Outboard is one of six Elco models ranging from five to 50 hp.
