ELCO INBOARD WINS GREEN PRODUCT AWARD IN NEWPORT

Uniting its unceasing drive for innovation with its commitment to protecting the environment, Elco was honored with a 2024 Newport For New Products™ Award. Presented at the Newport International Boat Show, the state-of-the-art Elco EP-250 inboard marine propulsion solution won in the Green Product category.

Elco and Lancer Craft collaborated to power a 20-foot Electric Legacy. Replacing the classic runabout's V8 gas engine, the EP-250 provides exhilarating acceleration and impressive 35-mph top-end speed. With new solid-state batteries, the boat travels more than 30 miles at 30 mph, 40 miles at 20 mph and cruises an entire day and night at 7 mph. "Our cutting-edge motors and battery flexible design allow us to compete with gas or diesel pound-for-pound in size and performance," said Dean Heinemann, Elco general manager.

The EP-250 inboard has four moving parts, making it far more reliable than traditional gasoline or diesel alternatives, yet offers comparable thrust. Fitting within a two-foot cube and weighing only 205 lbs., it's a straightforward replacement for both OEM and retrofit applications. Another motor, Elco's EP-40 that replaces gas or diesel engines up to 40 hp, also earned accolades from the judging panel.

With NMEA 2000® compatibility, accessing motor and battery data on a multifunction display is as easy as plugging it into the network

backbone. Alternatively, Elco offers the *DASH* companion mobile app that conveys a wide range of performance and system data.

"We're exceptionally pleased and honored to receive this award," Heinemann said. "Like all our inboard and outboard marine propulsion solutions, the EP-250 offers the power and performance mainstream boaters expect along with the benefits of electric propulsion."

Founded in 1893, Elco manufactures outboard and inboard electric marine propulsion solutions for commercial and recreational applications. It offers a range in comparable power from five to 250 hp.
