NEW STAINLESS INLETS SPEED WATERTIGHT CONNECTIONS

Seasoned mariners know that watertight integrity is critical for reliable shore power connections. Stainless steel 30A and 50A inlets from Hubbell Marine assure dependable performance in a timeless design that now benefits from recent technical updates.

Hubbell 125V Twist-Lock ship-to-shore inlets now incorporate a self-supporting hinge configuration that holds the cover clear of the cord set when in use. They also feature an upgraded recessed thread design that provides faster connections while ensuring a completely watertight seal.

Durable 316 stainless steel construction delivers a long service life. Nickel-plated brass contact blades and a polycarbonate interior provide the 2-pole, 3-wire inlets with superior heat-resistance. Hubbell's use of corrosion-resistant materials helps each device withstand the harsh elements, especially saltwater environments.

Available in 30A and 50A models, Hubbell Twist-Lock inlets are fully compatible with existing Hubbell cord sets. Both UL and cUL listed, they can be used on boats as well as on shoreline installations at marinas. Utilizing a 2.38" mounting hole to match existing patterns for an easy retrofit, the new inlets are supplied with mounting screws, a waterproofing gasket and rear enclosure strain relief. MSRP starts at \$572.
