DC COMPONENTS SAFELY POWER ELECTRIC FISHING REELS

Electric reels are popular with offshore fishermen in spite of sometimes being awkward to connect to a power supply. To assure a convenient, safe way to operate these popular devices, Hubbell Marine offers a full line of components designed expressly for DC-powered reels.

As the first to market with such a system, Hubbell's 30A, 28V solution provides a safer and more convenient means to power all 12V, 24V and 32V DC electric fishing reels, compared to battery clamp connections. The product line includes a corrosion-resistant plug, connector body and receptacle that fit a range of standard Hubbell boxes and covers to match the look of the boat's existing electrical components. Its unique plug configuration protects against the dangerous possibility of accidental connection with AC devices.

Crafted with nickel-plated contacts for corrosion resistance and durable nylon bodies that withstand both impact and UV exposure, Hubbell's electric fishing reel components are UL listed and CSA certified. Receptacles, plugs and housings are available in high visibility yellow or elegant white to suit any boat's décor, with boxes and spring-loaded lift covers also in gray. Suggested retail prices for DC Fishing Reel components start at \$45.99 for the plug and \$56.99 for the receptacle.
