RITCHIE GLOBEMASTER COMPASS IS SOLAS COMPLIANT

While commercial fishermen and professional mariners appreciate the convenience of electronic navigation devices, they respect the critical importance of having a magnetic compass on board. Ritchie Navigation engineered its 5" binnacle-mounted Globemaster line specifically for those who earn a living on the water. SOLAS reg. 19, sec. 2.1 compliant, the compasses are available in a wide range of configurations, including with steel boat quadrantal correctors.

Each Globemaster compass has a black PowerDamp card with the option of markings in 5°, 2° or 2° with points. It has bold white numbers and a 90° lubber line; yellow 45° lubber lines are available on certain models. Ritchie also offers choices of integrated red or green LED lighting, and 12V, 24V or 32V to match virtually any vessel power network.

Like all Ritchie compasses, the Globemaster line is renowned for its stability. This is due to the card being set on a precision hardened steel gimbal with a scientifically-matched sapphire bearing. Built-in compensators ensure the dial moves fluidly and won't spin or jump when the vessel is tossed in heavy seas. For installation on a steel-hulled boat, the compass is available with fully adjustable quadrantal correctors.

Offered in polished or chromed brass or a durable black wrinkle finish, the Ritchie Navigation Globemaster comes with a five-year warranty and is 100% repairable. Prices start at \$948.89.
