SF MARINA DEBUTS CORPORATE VIDEO AHEAD OF SHOW SEASON

SF Marina, the global market leader in engineered floating concrete docks, breakwaters and advanced waterfront structures, has debuted a new corporate video. *Still there after the storm* illustrates how the company's innovative technology meets genuine craftsmanship.

Unlike many corporate videos, *Still there after the storm* has a high production value that is instantly engaging. A montage that beautifully forms a cohesive whole, the film shows the proven ruggedness of SF Marina systems and the dedicated people who build them. The video is at [bit.ly/SF-Marina](http://bit.ly/SF-Marina).

"The goal for this company video was to create something that matched our passion for quality and long-held promise to protect marina investments," said Michael Sigvardsson, SF Marina System AB CEO. "We're exceptionally pleased with the result of *Still there after the storm*."

Regardless of the dimensions, SF Marina can manufacture a floating concrete structure for virtually any recreational or commercial application. With a century of experience worldwide, its storm-proven products have overcome some of the worst weather on record.
