NEW GRAB RAIL FITS IN CHALLENGING SPACES

Companionways, swim platforms and other tight onboard spaces can be challenging places for OEMs to fit a grab rail. The new 7" Stainless Steel Grab Rail from Schmitt Marine was designed to accommodate various installation locations. Available in Top- or Under-Mount styles, it provides boatbuilders the flexibility to easily add an important piece of hardware to any boat. The accessory debuts at METSTRADE, November 15-17, Amsterdam, stand 2.216.

The striking 7" Stainless Steel Grab Rail is cast using marine-grade 316 stainless steel. Polished to a high shine and with a pleasing shape, it enhances boat décors from classic to ultra-modern. Complementing surrounding stainless steel fittings, it can also be used as a matching drawer pull handle. The hardware has finger indentations for safe and easy grasping and an impressively solid feel, yet comfortably fits a wide range of hand sizes.

Under-mounting Schmitt Marine's 7" Stainless Steel Grab Rail requires two 1/4"-20 screws. The top-mount version needs two #14 screws. They're backed by a lifetime warranty.
