LEATHER-WRAPPED WHEEL MATCHES DESIGN, CAPTURES SPIRIT

OEMs often struggle to find a durable wrapped-and-stitched steering wheel that not only matches a boat model's design concept, but captures its spirit. With the award-winning Torcello Elite PU08 from Schmitt Marine it's simple for boatbuilders to configure an NMMA-certified and CE-marked premium wheel that does both—at a price point that doesn't cut into profits.

Every steering wheel project is a collaboration between the OEM and Schmitt Marine engineers. Digital renderings provide the builder with a realistic idea of how the final wheel will appear on the boat's dash or console. Plus, company reps can provide samples that demonstrate the Torcello Elite's robust construction and high-end appearance.

The 14" polyurethane Torcello Elite is all about customization. Marine-grade synthetic leather and thread are available in a wide assortment of colors and hand-stitched for a premium hand feel. The three stainless steel spokes can be polished or anodized black and are solidly connected to the rugged wheel rim. A selection of center caps are offered and can be customized with the OEM's logo. To accommodate a wide range of steering components, the Torcello Elite is available with a 3/4" tapered or optional splined hub.
