HELM COMPONENTS MATCH SPORTFISH YACHT QUALITY & ELEGANCE

Large offshore sportfish boats are both highly functional and remarkably beautiful. That's why the Yacht line of Schmitt Marine steering wheels and control arms are such an ideal addition to their main and second station helms. Exceptionally elegant, they're built to match the same standards of quality and classic good looks as the vessels they grace.

Yacht Steering Wheels are made from highly polished cast 316 stainless steel. Incredibly strong and warrantied for life, they exceed ABYC P-22 and ISO 8848 standards. Perfect for OEM and refit, they're offered in four configurations: 13-1/2" or 15-1/2" diameters, and with a 3/4" Teleflex tapered shaft or a 1" flush-mount bolted shaft. Designed for all-day use, they have ergonomic finger grips and a generous width for a solid, yet comfortable hand feel.

Companion Schmitt Marine Yacht Control Arms are built to the same standards of premium quality as its wheels. The solid, polished 9" L arms are offered in a standard version or with an integrated bow thruster button. Both fit most single lever side mount controls.

MSRP for Schmitt Marine 13-1/2" Yacht Steering Wheels is \$1,200, and \$1,400 for the 15-1/2" versions. The standard Control Arm is \$375; the Bow Thruster model is \$700.
