NEW SEA-FIRE MARINE WEBSITE GOES LIVE

Sea-Fire Marine, the global leader in fire detection and suppression technologies for recreational, commercial and military vessels and related marine and land-based structures, has launched a new website. The domain remains www.sea-fire.com.

With fast response functionality for browser and mobile compatibility, the website features a user-friendly design with improved navigation and search performance. To accommodate its international customer base, it automatically detects the users' set preferences and will display a custom landing page in one of seven languages. Copy has been enhanced to better position Sea-Fire's extensive product range and provide easy access to the applicable design guides, manuals, data sheets and type approvals. A profile video provides an overview of the company while the new dealer locator quickly delivers contact information for its robust distribution network.

"We're especially pleased with the results of our ambitious website revision," said Ernie Ellis, Sea-Fire president. "It aligns with our company vision for growth, provides for future expansion and will serve as a useful, informative portal for our customers and the markets we serve." Since 1978, Sea-Fire Marine has manufactured a wide range of portable, pre-engineered and engineered fire systems. Its products are built to ISO 9001:2015 standards and meet all major international approval standards.
