FINALLY, CROSSBARS FOR VEHICLES WITH ROOF RIDGES

Between grooved channels, vents and air conditioners, adding crossbars to an RV roof is nearly impossible, especially without drilling into it. The ridged roofs on many camper vans, overlanders and sport utility vehicles present the same obstacle. SeaSucker overcame these challenges with Ridge Ready Monkey Bars. They're so innovative, SEMA (the Specialty Equipment Market Association) honored them with two Best New Product awards at its recent show.

Made in the USA, Ridge Ready Monkey Bars use SeaSucker's Vacuum Mount technology. Unlike industrial suction cups that lose their seals soon after they're applied, the four front and two rear 3.25" oval mounts combine for a total holding power of 990 pounds at highway speeds. This unique shape is specifically designed to fit between the roof ridges common to jeeps and many sport utility vehicles, but works equally well on RVs and towed campers.

The Vacuum Mounts attach to 48" or 60" black powder-coated aluminum crossbars via solid marine-grade HDPE polymer and stainless steel hardware. To accommodate various vehicle sizes, the assemblies can be moved to any position to ensure a perfect fit. The bars unscrew to make it easy to store them when not in use and are industry standard 1.325"/33mm dia. to accept other brands' accessories.

Installing SeaSucker Ridge Ready Monkey Bars is easy. Placed on any clean, non-porous surface such as paint or fiberglass, the integrated pump on each Vacuum Mount is pushed until the orange indicator band disappears. Mounts can hold for days; should the band reappear, a few quick presses will recharge the holding power. When it's time to remove the bars, the T-shaped tab is lifted to break the seal.

SeaSucker Ridge Ready Monkey Bars come with a spare vacuum pump and a 5gm container of maintenance lubricant. The 48" model costs \$549 and the 60" version is \$599; both come with a limited lifetime warranty.
