SEAHUNTER LAUNCHES WITH SHADOW-CASTER LIGHTING CONTROL

SeaHunter Boats is savvy about leveraging technology and market trends. That's why they're incorporating the Light Commander PLUS from Shadow-Caster into their line of center console catamarans and monohulls. Beginning with the 2023MY Tournament 35, the OEM is integrating the state-of-the-art NMEA 2000® ready light controller into its full model line.

The Light Commander PLUS provides fingertip control over all vessel interior, exterior and navigation lighting from a single MFD screen. For SeaHunter, the benefits are simple plug-and-play installation and a premium-quality selling feature.

"Our implementation of the Shadow-Caster Light Commander PLUS system delivers a new level of performance to our boats and provides our customers with the ease of operation they're looking for," said Chris Conard, VP of SeaHunter Boats. "Now, owners can quickly access their vessel's full lighting array without leaving the helm." Princeton, Florida-based SeaHunter manufactures nine models ranging from 37' to 46' L. Its website is www.seahunterboats.com.

Beyond NMEA 2000 compatibility, the Light Commander PLUS includes Ethernet connectivity for complete vessel-wide interface integration. The compact device supports up to six lighting zones and can expand to 18. A video is at www.bit.ly/LightCommanderPLUS.
